

Self-Attestation Form for COVID-19 Vaccination: Moderately to Severely Immunocompromised Patients

CDC recommends that people who are moderately to severely immunocompromised receive an additional dose of an mRNA COVID-19 Vaccine (Pfizer-BioNTech or Moderna) at least 28 days after the completion of the initial mRNA COVID-19 vaccine series.

Patients may self-attest to their condition by completing and signing this form.

Please check one of the following and sign at the bottom.

Moderately to severely immunocompromised includes people who have:

- Receiving active cancer treatment for tumors or cancers of the blood
- Received an organ transplant and are taking medicine to suppress the immune system
- Received a stem cell transplant within the last 2 years or are taking medicine to suppress the immune system
- Moderate or severe primary immunodeficiency (such as DiGeorge syndrome, Wiskott-Aldrich syndrome)
- Advanced or untreated HIV infection
- Active treatment with high-dose corticosteroids (i.e., ≥ 20 mg prednisone or equivalent per day for ≥ 14 days) or other drugs that may suppress your immune response [e.g., alkylating agents (cyclophosphamide); antimetabolites (methotrexate); transplant-related immunosuppressive drugs (cyclosporine, tacrolimus, everolimus); TNF-blockers (etanercept)]
- Other condition(s) which cause moderate or severe immunosuppression similar to the above conditions

People should talk to their healthcare provider about their medical condition, and whether getting an additional dose is appropriate for them.
